Dear Graduate Admissions Committee,

It gives me immense pleasure to suggest **Tanbin Siddique Eidul** for his higher education. I got to know Tanbin as a hard-working individual. I was his instructor for the Algorithm course during his time at East West University. He was involved in various activities such as organizing events, participate in programming computations, and also playing Badminton.

He has always been interested in web development and cyber security, and following graduation, he started working as a Front-End Developer. He spent most of his time learning programming languages, robotics, and freelancing techniques. He has outstanding English skills and has performed admirably both within and outside of the classroom. Overall, he is well-versed in both broad as well as in topics in Computer Science and Engineering.

I've always thought of him as industrious and humble. A few of his positive traits include blood donation, charity, helping mentality, and flexibility. Despite his tough circumstances, he was able to earn his bachelor's degree because of his positive mindset, can-do attitude, and team-building skills. I can attest to the fact that having him as a student was always a joy for me.

It is my strong opinion that Tanbin would be a tremendous addition to your graduate program, and he has my highest recommendation. Please feel free to contact me if you have any questions regarding his character or past academic work.

Sincerely,

09-10-2021
